## Newest kodi on firestick

UPDATED FOR KODI 19.1 Below is the easiest method for installing the Kodi application on your Firestick or Fire TV. No computer is required. The guide will show you how to install the latest, stable version or you can also choose to use the link for Kodi 18.9 if you don't want to switch up to 19 yet it is becoming more and more important to protect yourself online. This can easily be done using a VPN that stops your internet provider from being able to see what you are accessing online. It also removes any blocks put in place by your internet provider. They are also great for using when you are using public unsecured Wi-Fi use and can recommend IPvanish. Use the link below to their website which will give you an extra discount. I also have a guide for installing a VPN on Fire stick which you can find here If you already have Downloader installed on your Firestick/FireTV you can skip past the installation of that app and just enter the necessary URL Open Firestick/FireTV Select Settings In Settings scroll down and select My Fire TV Select Apps from Unknown Sources Now go back to your Home Screen. Highlight Find and then select Search (this is an update on May 15th 2021) In the next step you are asked to type in downloader to search for it. Today it was noticed that it no longer appeared for some when typing. If this is the case for you too then simply click and hold the Voice Search button on your Fire Remote and say "Downloader" and you will see it and can then install it. Now use the keyboard and start typing Downloader. Once you see Downloader underneath select it In the next screen select the Downloader icon Once downloaded select Open Select Allow when asked to give Downloader access to files (necessary for it to install APKs) Select OK once the app opens You will now see the following screen. Select the URL section Type ONE of the following and then click Go: The download will now begin When the download completes you will see the following screen. Select Install Installation will begin When the installation completes select Done Kodi is now installed and the installation file has been deleted to save room on your Fire device To access Kodi you can select the App Launcher on your Home Screen and the app can be launched from within there I recommend using a VPN to help keep yourself anonymous and protect yourself online. You can get large reductions on any package from IPVanish & 20% off any Strong VPN Package which allow you to connect multiple devices to an encrypted VPN connection at any one time. Native apps for Android TV, Android, iOS, Mac, Linux, and more OS' Unlimited connections (On IPVanish) Access all Kodi add-ons anonymously Tier 1 hardware (no speed slowdown) 250 GB SugarSync Online Storage (IPVanish) Prevent ISP Throttling Log-free, so you can't be tracked 30 day money back guarantee (On IPVanish) The ability to be configured right at your router, for a hassle-free experience. This page includes affiliate links where TROYPOINT may receive a commission at no extra cost to you. Many times, you will receive a discount due to the special arrangements made for our visitors. I will never promote something that I personally don't use or recommend. Purchasing through my links directly supports TROYPOINT which keeps the content and tools coming. Thank you! This step-by-step tutorial will show you how to install Kodi on Firestick (Fire TV Stick), Fire TV, and Fire TV Cube. This process will also work on Fire TV televisions. Kodi on Firestick or Fire TV will allow you to watch free movies, TV shows, live channels, sports, and more. Kodi is listed as one of the Best APK's by TROYPOINT. Because Kodi is not available in the Amazon App Store, we must side-load it onto our device. This side-loading process is also used to Jailbreak a Firestick or Fire TV which will allow you to stream free Movies, TV Shows, Sports, and more. Stream Faster & Anonymously This page is continually updated and will always provide relevant guides with the most recent stable release of Kodi. As of today, Kodi 19.1 Matrix is the stable version. I have developed three different guides to install Kodi on Firestick and the Fire TV, which are outlined below. In my opinion, the first method is the easiest since you don't need a computer and it takes less than 2 minutes to complete. The following methods work on all devices; 1st Generation Fire TV, 1st Generation Fire TV Stick, 2nd Generation Fire TV, 2nd Generation Fire TV Stick, Fire TV Stick 4K, Fire TV 3, Fire TV Cube, Fire TV Stick 4K, Fire TV Stick Lite, and Fire TV Televisions. You will find both a video tutorial and a screenshot guide below. Kodi can also be found within various Filelinked Codes. How to Install Kodi on Firestick, Fire TV, Fire TV Cube, Fire TV Stick 4K, Fire TV Lite – Kodi 19.1 Matrix 2021 Guide Kodi on Firestick / Fire TV / Fire TV Cube Video Tutorial TROYPOINT Tip: Click the pause button on the video player between each step so you can follow along. Current Stable Release is Kodi 19.1 Matrix GET YOUR FREE GUIDEDownload by Over 1 Million Kodi users Kodi doesn't do much without the popular 3rd party addons that provide free movies, TV shows, live channels, PPV, sports and more. Install the best Kodi addons with the click of a button by using my free Supercharge Kodi guide. GET YOUR FREE GUIDE Kodi Screenshots Home Screen Movies Category File Manager Add-Ons Exodus Redux Interface Options Install Kodi on Firestick / Fire TV / Fire TV Cube Screenshot Tutorial 1. Install the Downloader app from your respective App Store (Amazon App Store or Google Play) and enable Unknown Sources within settings of your streaming device. If you haven't done this yet please refer to the following screenshot tutorial for step-by-step instructions or watch the video above. Install Downloader & Enable Unknown Sources 2. Launch Downloader 3. If prompted, click Allow 4. Click OK for developer notes 5. Click OK button on remote to open the keyboard and type in the address for Kodi 19.1 which is troypoint.com/kodistable If you would like to install Kodi 18.9, you will type in troypoint.com/k18 Click Go button after typing in address and Kodi download will begin. 6. Click Install on Kodi setup page 7. Click Done once Kodi has been installed 8. Click Delete to discard the Kodi installation file as this will free up valuable space on your Fire TV Stick, Fire TV, or Fire TV Cube 9. Click Delete again 10. Return to your device home screen. Launch Kodi and click "continue" button 11. Click Allow and Kodi will begin to load. 13. You are now presented with Kodi 19.1 Matrix home screen on Firestick, Fire TV, or Fire TV Cube. Kodi is now installed! Now, it's time to install the best 3rd party Kodi addons that will provide free movies, TV shows, live channels, sports, PPV, and more. Our free Supercharge Guide will teach you how to install the best Kodi addons with the click of a button on your Firestick or Fire TV. Click Here for Free Supercharge Guide Other Popular Methods Of Installing Kodi On Firestick, Fire TV, and Fire TV Cube Install Kodi on Fire TV Stick, Fire TV, and Fire TV Cube with ES File Explorer Important Note: ES File Explorer now charges for their app. Learn how to get the modded free premium app through our ES File Explorer Firestick tutorial. ES File Explorer is a popular file manager that is used on all types of Android and Streaming devices. It is an awesome tool for installing and managing apps and is easy to download. Follow the steps below to Install ES File Explorer and Download Kodi on Firestick/Fire TV: 1 – Turn on Apps from Unknown Sources within Fire TV Settings 2 – Return to home-screen. Search for and Select ES File Explorer 3 – Click Download 4 – Click Open 5 – Click Agree 6 – Scroll down and Select Tools from left-side Menu 7 – Click Download Manager 8 – Click New 9 – Click link next to Path 10 – Type the following URL exactly as shown here: and click Next 11 – Type a Name for this Path, enter Kodi and Click Next 12 – Click Download Now 13 – Wait for file to download 14 – Click Open File 15 – Click Install 16 – Click Install again 17 – Click Done That's it! Kodi is now installed on your Fire TV Device. If you want to rearrange the location of this app on your home-screen, you can easily do so: Rearrange Firestick Apps on Home Screen Install Kodi on Firestick, Fire TV, and Fire TV Cube with AppStarter AppStarter is a great tool to install and manage apps. Users can easily use this application to update Kodi when a new version is available without going through the entire installation process again. Use the steps below to Install Kodi on Firestick with AppStarter: 1 – Turn on Apps from Unknown Sources in Settings 2 – Install Downloader application from the app store and open it 3 – Type into Downloader URL box to install AppStarter 4 – Click Install 5 – Click Done 6 – Click Delete 7 – Delete again 8 – Launch AppStarter 9 – Hover Over Updates on the left side of the Screen and next to Kodi click Install 10 – Wait for download to finish 11 – Click Install 12 – Click Done Installation is complete! The Kodi developers do an outstanding job of updating the application. Learn how to quickly update Kodi on Firestick when a new version is available by clicking the link below. How to Update Kodi on Firestick & Fire TV Don't Get Clipped! Most cord-cutters use IPVanish VPN and rightfully so. The free streaming applications, addons, and paid IPTV services are usually hosted on insecure servers. These shady outfits log everything that you access through their app or service. Without IPVanish, your IP Address is being logged along with everything that you access through it. Your IP Address points back to your location and identity which compromises both your privacy and security. Your current identifying IP Address is 100.10.75.96 When you use IPVanish VPN, your IP address is masked and converted into an anonymous one. IPVanish VPN will provide you with an anonymous connection to the Internet. This will prevent your Internet Service Provider, app/addon developers, government agencies, and other 3rd parties from logging what you're accessing online. Setting up IPVanish VPN on your streaming device is simple! Step 1 Register for an IPVanish VPN account by clicking the link below. This special link provides you with a large discount. Register for IPVanish Account & Save 74% (EXPIRES SOON) Step 2 – From the home screen hover over Find. If you're using an Android TV Box, you can also find the IPVanish application in Google Play Store. Step 3 – Scroll down and click Search. Step 4 – Type in "ipvanish" and click the first option. Step 5 – Click the IPVanish VPN app. Step 6 – Click Download. Step 7 – Once the IPVanish app installs, click Open. Step 8 – Enter your IPVanish account information and click Log In. Step 9 – Click Connect. Step 10 – Click OK. Step 11 – That's it! You have installed IPVanish VPN on your Firestick/Fire TV. Now, click the home button on your remote and the VPN will continue running in the background. Congratulations! You are now protected by a VPN which means everything that you stream or access through your Firestick or Android TV Box is hidden from the rest of the world. If you ever need to stop the VPN service, simply re-launch the application and click the DISCONNECT button. Frequently Asked Questions Oftentimes a quick reset of the Kodi app will fix any issues you are having. Simply clear the app's data within the settings on your device. Installing Kodi or any other app not available in the Amazon App Store can be considered jailbreaking your device. However, there are much more options to get the most out of your device. To delete any apps on your device, scroll to see all apps and hover over the one you choose to delete. Click the 3 horizontal lines on your remote and choose uninstall. Kodi is 100% legal and available for installation on nearly any device. However, what you access on Kodi may be illegal. Always use a VPN as outlined on this page so you can use your Firestick anonymously. See some help getting the latest version of Kodi up and running on your Fire TV? We walk you through the process, using adbLink, Downloader, and apps2fire. They sound more technical and complicated than they are, so just follow our guide step by step, and you'll be streaming in no time! Kodi is by far one of the best media center apps around. It's free, easy to use, runs on a wide variety of devices, and it supports a ton of fantastic third party add-ons, everything from live sports to music to live TV channels. You can even download custom Kodi builds for Fire TV! Keeping Kodi up to date with Fire TV can be a little more difficult than on other devices though, all due to the nature of Kodi installs. If you think your version of Kodi is starting to fall behind, read on for our full guide on how to install the latest version of Kodi on the Fire Stick or Fire TV. And don't worry, upgrades will only take a few minutes! Remember – Always Use a VPN with Fire Stick It doesn't matter if you're installing Kodi 17.6 on your Fire Stick, running a sideloaded copy of YouTube on Fire TV, or just streaming a few movies you rented through Amazon, using a VPN while running your device is always a smart decision. VPNs encrypt data leaving your home network to keep traffic anonymous and secure. Without it, it's easy for anyone to spy on your activity, including ISPs, government agencies, and even hackers. Finding the best VPN to use with Fire TV can be challenging. You need top notch speeds to keep video quality as high as possible, but you can't sacrifice privacy or security in the process. We've researched the top VPN providers to find the services that work best with Kodi and Fire TV. Our recommendation is below, and it's the perfect solution for safe, private, and easy video streams on Fire TV. NordVPN – Best VPN for Kodi NordVPN has been around for almost a decade, but they've done anything but remain stagnant. They've taken in the feedback of thousands of users over the years, and have refined their offering to become the most sophisticated privacy solution on the market. And one of the more recent developments is a dedicated app for Firestick–no sideloading, jail breaking or router installations required. What's more, NordVPN has grown its server network to epic proportions, covering more than 5,500 nodes in 59 countries. If that weren't enough, they also launched NordLynx–a branch of the cutting-edge WireGuard protocol–geared for speed but utterly uncompromising on your security. Shrouded by the 256-AES-GCM encryption cipher, you'll stop third-party surveillance of your Kodi traffic–blocking out ISP tracking and throttling for good. Connecting to an encrypted NordVPN server also has the benefit of "spoofing" your IP address to match that of the country where the node resides. With your new false digital identity, you can fool websites, apps, and Kodi add-ons into serving you streaming content which otherwise be restricted behind geoblocks. And, rolling with a spoofed IP anonymizes your traffic, making you intensely difficult to target with the most common cyber-attacks. Backed by NordVPN's strict no-logging policy, you can stream, download, or browse in total privacy. Read our full NordVPN review. Pros SPECIAL OFFER: 2-yr plan (68% off - link below) Extensive server park of over 5,400 different servers Allows multiple connections (6 devices) Strict zero logs policy on both traffic and metadata Live chat support is available. Cons Very little Can't specify City or Province in App. Preparing Your Fire Stick for Kodi Installation Since Kodi isn't available to download directly from the Amazon app store, you'll need to go through a process known as sideloading to get it installed. It isn't as complex as you might think, but before you begin, there are a few things you should check first. Recommended vs Nightly Builds When you head to Kodi's downloads page and click on the Android icon, you'll notice several tabs at the top of the screen: Recommended, Pre-release, Development Builds. These three sections split the downloadable content into categories designed for a slightly different audience. Which one you choose depends on your specific needs. Almost everyone will want to stay on the Recommended tab and download the latest stable version of Kodi. This may be a full release cycle behind the other tabs, but the compatibility is guaranteed, and you won't run into any kind of crashes or other errors that might be present in pre-release or development builds. Plus, since sideloading takes more time than a quick "click & install", you don't want to go through a new update every couple of weeks. Pre-release builds are semi-stable alpha and beta releases of the upcoming Kodi version. This will be a bit further ahead than the recommended "stable" build, but you can run into compatibility and crashing issues, since the software isn't finalized. Development builds are even more cutting-edge than the pre-release builds and can be updated as often as every night. Unless you need the absolute latest in Kodi software and don't mind sideloading an apk file every few days, always download the recommended build for Kodi, as it's the latest stable release. Verify Your Kodi Version Number If you're installing the latest version of Kodi, you'll first want to make sure it's actually necessary! Large Kodi updates are only released a few times per year, at their most frequent. Follow the steps below to check the version number of your Fire TV's Kodi installation. Run Kodi on your current Fire TV or Fire Stick device. Go to the main menu and click or tap the gear icon to enter the settings page. Scroll down to the System information icon. Make sure you're on the Summary tab. The Kodi version number will be displayed in the lower right corner of the screen where it says "Build". Take this build number, then go to your PC web browser and visit the Kodi downloads page. Scroll until you see the Android icon and click it. Look under the "Recommended" tab for the current Kodi release. If it's equal to what you have installed, there's no need to upgrade. Allow Unknown Sources Installing software to your Fire TV device means going through the process of sideloading. The Fire TV operating system has a default setting that disables external installations by default, so in order to add Kodi to your system, you'll need to disable it. Doing this is perfectly safe and won't harm your device in any way. Follow the steps below and you'll be ready to sideload in just a few seconds. Go to your Fire TV's settings page located at the top of the home menu. Scroll right and choose Device Move down to Developer Options Set Apps from Unknown Sources to ON. Accept the warning message about installing external apps. Should You Uninstall the Old Version of Kodi First? Unless you want to start over from a fresh install of Kodi, there's absolutely no reason to uninstall the previous version of the software before getting the latest release. In fact, it's better if you leave the original one installed, as this will preserve your settings, add-ons, and sources so you don't have to configure everything again. Simply install the new Kodi over the old one, that's it! How to Install the Latest Version of Kodi on Fire TV Got everything set up and ready to go? The actual installation process is a breeze once you've assembled all the materials. Below we'll cover three of the main sideloading methods most people use for adding new apps to their Fire Stick and Fire TV devices. You can choose any one you like. Method 1 – adbLink If you have a good laptop or desktop PC on the same network connection as your Fire TV device, or if you want to sideload or manage multiple apk files with ease, using adbLink is by far your best option. This free software lets you connect to your Fire Stick to wirelessly add new programs, uninstall apps, and even browse the built-in file structure. It's an incredible tool no Fire user should go without, especially if you sideload apps on a regular basis. Available for Windows, Mac OS and Linux. Below are the instructions for installing adbLink and using it to sideload the latest version of Kodi on your Fire TV or Fire Stick device. Switch on your Fire TV stick and turn on the connected TV. Make sure "Apps from Unknown Sources" is set to ON. If you followed the preparation steps above, it will be set. Go to Settings > About – Network and write down the IP address of your Fire TV Stick. Visit the adbLink website on your PC and download the program. Install adbLink and launch it. In adbLink, click "new" next to the devices box to add your Fire TV Stick. Type the IP address of your Fire TV Stick into adbLink and save the changes. On your PC, visit the Kodi download page, click on the Android icon, and get the ARMV7A version of the apk. Save it somewhere easy to access, like your computer desktop. In adbLink, click the Install APK button. Select the .apk update file you just downloaded. Click Yes when the install APK prompt appears. The new version of Kodi will install to your Fire TV Stick and be available to use in a few moments. Method 2 – Downloader App If you don't have access to (or just don't want to use) a separate PC program to sideload, the Downloader app is a fantastic alternative method. All you need to do here is get the app on your Fire TV by downloading it from the built-in marketplace, type in the URL to the Kodi apk, then install. It's simple and easy, though typing long links using the Fire Stick remote can be something of a hassle. Follow the steps below to use Downloader to sideload Kodi onto your Fire device. Open the Amazon Appstore on your Fire TV by going to the home page and choosing Apps. Browse for Downloader under the utilities category and install it. While that installs, visit the Kodi downloads website on your PC. Click on the Android downloads icon and stay on the Recommended tab. Look at the direct link for the latest Android ARMV7A release build. It should automatically point to the latest version of Kodi. Copy this URL somewhere safe. You could also take a picture using a smartphone. Back on your Fire Stick, run the Downloader app. Type the URL from above into Downloader's URL box. Downloader will fetch the file from the website. When the download completes, choose to install and launch the apk automatically. Kodi will then be accessible from your Fire Stick at any time. Method 3 – apps2fire If you have a separate Android device you often use, installing Kodi to your Fire Stick via apps2fire is probably the most convenient method of sideloading around. The software simply copies Android apps from your smartphone to Fire TV, it's that simple. You'll need to install Kodi on your other device first, but then apps2fire will take care of the rest. Follow the guide below to sideload the latest version of Kodi to Fire TV using apps2fire. On a separate Android device from your Fire TV, install apps2fire. Make sure it's the official one developed by Koni, not one of the copycats. Install or update Kodi on the same Android device. There's no need to visit the Kodi download website, just use the Google Play store. Run apps2fire and let it create a list of your local installs. When the scan is complete, slide the menu left and tap Setup. On your Fire TV, go to Settings > About – Network and write down the IP address. Back in apps2fire, enter your Fire TV's IP address and tap "Search Fire TVs". Go to the Local Apps tab and scroll down to Kodi. Tap the icon, then select "Install" when the window opens. After a moment, Kodi will upload to your Fire TV and install. This can take a few minutes depending on the speed of your home Wi-Fi. After a few moments, apps2fire will notify you when the install is complete. Now run Kodi on your Fire TV and you're set! Conclusion Kodi is an incredible piece of software that works as an unofficial alternative to Netflix and a replacement for dozens of other popular pieces of software. It runs like a dream on Fire TV, as well, so once you get it installed and start streaming, you'll be hooked!
